Why I would like to participate in the competition, there are several things about that. Some of the most important things in the IT industry are soft skills. In my opinion without soft skills, we cannot progress in the company hierarchy. I would like to quote Warren Buffett – „*I don't have my diploma from the University of Nebraska hanging on my office wall, and I don't have my diploma from Columbia up there either-but I do have my Dale Carnegie public speaking graduation certificate proudly displayed*". Those are the words of the best investor in the world of all time, the oracle of Omaha. So, without soft skills, we cannot progress either in professional life either personal life. At the end of this discipline, I would like to improve my communication, problem-solving, leadership, work ethic skills, teamwork, and time management skills so that I can communicate in any situation, deal with difficult decisions, manage projects, time and people, and be a role model one day.

What I would like to become when I grow up, that's a very interesting question that I'm so glad to answer. I've been involved in computer science and math my whole life. Since childhood, I followed people like Steve Jobs, Bill Gates, Larry Page, Mark Zuckerberg, Elon Musk, Jeff Bezos ... and was excited about their success and the companies they build. Since then, I'm dreaming of their success, that one day I'll become one of them, and have a multi-billion tech company that's going to change the world, as Steve Jobs told John Sculley – „*Do you want to sell sugar water for the rest of your life or come with me and change the world?*" Two things from my childhood drive me forward, my boundless interest in computer science and personalities, such as those who have become an icon, a religion and a standard of success. I would like to become successful tech entrepreneur like them.

What I would like to work in the IT industry? Now I'm working as a junior full-stack software engineer with Java technologies. I would like to become that kind of person that can take on great responsibilities in the company, manage teams, projects, be a leader, and a role model in the technical and soft skills aspects with strong discipline and personally established principles. In short, a valuable person, without whom the balance will be disturbed. I see IT positions like software architect and project manager exactly as I described above. I would like to become a highly valuable senior software engineer, software architect or project manager. We all dream of a higher position. I will even dare to say that I would like to become a principal engineer or principal software architect, or even chief executive officer or chief technology officer. Throughout our lives, we learn, dream, and strive upwards!
